

# Asthma Relief?

Could opening up this airway...

...help open this one?

Many of the known triggers for Asthma - airborne pollutants, tobacco-smoke, mould spores from condensation and house dust mites - are enhanced in modern homes by a lack of adequate ventilation. Re-opening a closed-up

fireplace and installing a solid fuel open fire will improve natural ventilation, providing up to four air changes an hour in the room. If you would like to know more about opening up your fireplace, simply call the freephone number below.
